

27.08.24.

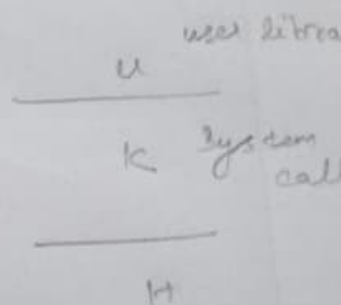

Directory to show the content  
ls /proc.

ps - this command to use what process  
going on.

ps -ax - Background process will be  
show.

Process creation :-

If you create a process to use  
the system call.

Process creation

- \* System()
- \* fork()
- \* wait()
- \* waitpid()
- \* exec()
- \* clone()

~~System~~ + ()

System() - library function

All system call is like to call a  
clone system call.

fork () -

\* It is create a child process.

\* This one process the parallel.

child & parent.
